SUMMARY

Frontend Engineer with 5+ years of production experience, the last two focused almost exclusively on React and Next.js with TypeScript. Comfortable owning UI from API contract to component-level testing, and confident shipping in remote, cross-functional teams. Strong full-stack context lets me design frontends that respect backend constraints (pagination, latency, auth boundaries) instead of fighting them.

SKILLS

Languages	TypeScript, JavaScript (ES2020+), HTML5, CSS3
Frameworks	React, Next.js, Redux
Styling & UI	CSS Modules, responsive layouts, component-driven design
Testing	Jest, React Testing Library, manual end-to-end checks
API integration	REST, GraphQL, JSON contract design with backend teams
Tooling	Git, GitHub, GitHub Actions, npm/yarn, Docker (consumer-side)
Adjacent	Django REST, Node/Express (read enough backend to integrate well)
Workflow	Agile / Scrum, code review, sprint planning, technical specs

EXPERIENCE

KNG Technologies	September 2022 – Present
<i>Frontend Engineer</i>	<i>Remote</i>

- Lead frontend work on the team's internal platform, building Next.js / TypeScript features that consume a Kafka-backed event pipeline for real-time data display.
- Built and maintained a shared React / Next.js component library used across [N] internal apps, cutting duplicated UI code and shortening time-to-ship for new screens by an estimated [N]%.
- Wrote Jest and React Testing Library coverage for [N]+ components, hooks, and form flows, locking in critical UI behavior before each release.
- Designed REST API contracts together with backend engineers; raised pagination, payload-shape, and error-format issues early so the frontend wasn't paying for them later.
- Configured GitHub Actions for typecheck, lint, and test on every PR; CI cycle held under [N] minutes as the codebase grew.

Cyboticx	October 2021 – June 2023
<i>Full-Stack Developer (Contract)</i>	<i>Remote</i>

- Built React and Next.js interfaces in TypeScript with strict type-checking for a customer-facing platform.
- Implemented Elasticsearch-backed search UIs with debounced input, faceted filters, and result pagination.
- Wrote Jest tests for components and utilities; supported frontends deployed via Kubernetes behind CircleCI pipelines.

Credmap	September 2020 – June 2022
<i>Backend Engineer (with frontend contributions)</i>	<i>Accra, Ghana</i>

- Contributed to the React-based admin and operator interfaces for *Panabios* and *Alkemy Care*, B2B platforms in Ghana's pharmaceutical and health space.
- Worked across the stack so frontend tickets were never blocked waiting on backend changes I could make myself.

SELECTED PROJECTS

- **Spiika** – African language learning platform with interactive courses across six languages. Next.js, React, TypeScript, Firebase. spiika.com
- **Artist Desk** – Project management platform for musicians and artists. Next.js, React, TypeScript, Firebase. artistdesk.com
- **Moms & Midwives** – Maternal health platform with chats, forums, contraction tracking, and video consultations. React frontend on a Django / Wagtail CMS backend. momsandmidwives.com
- **TLDR Web** – AI article summarizer with streaming responses and a glassmorphism UI. Next.js 15, TypeScript, Tailwind, Vercel AI SDK. tldr-pi.vercel.app

SELECTED WRITING

- React Patterns That Scale: Lessons From Production Applications
- TypeScript Patterns That Make Your Code Bulletproof

EDUCATION

Sakarya University	2023 – 2025
<i>M.Sc., Software Engineering</i>	<i>Sakarya, Turkey</i>
<i>Thesis: STACAD — Detecting and Attributing LLM-Generated Code through Stylometric and Transformation Feature Analysis</i>	
University of Energy and Natural Resources	Graduated 2021
<i>B.Sc., Computer Engineering</i>	<i>Sunyani, Ghana</i>

LANGUAGES

English (fluent) | Turkish (working)
