SUMMARY

Full-Stack Engineer with 5+ years of shipping production software in remote, cross-functional teams, ready to step into a Tech Lead or Engineering Manager role. I lead by writing the technical spec, scoping the work, surfacing the dependencies the ticket missed, and being the person on the team who can read every layer – frontend, backend, infrastructure, and increasingly AI integrations. Calm under shipping pressure, careful with engineering trade-offs, and direct in code review.

LEADERSHIP & ENGINEERING SKILLS

Technical leadership	Spec writing, architecture decisions, code review, mentoring junior contributors
Coordination	Cross-functional work spanning frontend, backend, DevOps, and stakeholders – the dependency graph nobody draws
Scoping & delivery	Breaking features into deliverables, estimating honestly, surfacing risk before it becomes a blocker
Methodologies	Agile, Scrum (sprint planning, refinement, retros, standups)
Communication	Translating between engineering language and stakeholder language; written specs, decision records, status updates
Hiring & growth	Reading code in a candidate's portfolio, conducting technical interviews, designing junior-friendly first issues

TECHNICAL BACKGROUND

Languages & frameworks: Python, TypeScript / JavaScript, Go, Django, React, Next.js, FastAPI, NestJS.

Infrastructure: Docker, Kubernetes, AWS, Helm, GitHub Actions, GitLab CI, CircleCI – enough hands-on time to lead infra decisions, not just sign off on them.

Data & events: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ.

AI: Claude, OpenAI, Gemini, Anthropic MCP – shipped customer-facing AI features at KNG and built an open-source MCP server.

EXPERIENCE

KNG Technologies	September 2022 – Present
<i>Tech Lead</i>	<i>Remote</i>

- Lead end-to-end on the team's distributed workflow service: architecture decisions, REST API contract design with frontend consumers, Kafka event-pipeline integration, and the deploy story on AWS / Kubernetes.
- Built and shipped a customer-facing AI assistant feature – owned the LLM integration, prompt design, frontend UI, and the cross-functional coordination with product on what the assistant should and shouldn't do.
- Designed CI/CD pipeline trade-offs explicitly (deploy speed vs. stability), so the team makes the call on purpose rather than by accident.
- Run code review for my area: enforce test coverage, push back on unclear specs, and make the codebase one a junior engineer can actually onboard into.
- Built reusable Django and Next.js libraries used across multiple internal apps, removing the duplicate-ramp-up cost when adding new features.

Cyboticx

October 2021 – June 2023

Full-Stack Developer (Contract)

Remote

- Worked across product and engineering on a TypeScript / Django platform, scoping frontend deliverables against shared backend services and surfacing risk early in the sprint.
- Maintained close communication with the product side as a remote contractor – which forced precision about status, blockers, and ETAs.

Credmap

September 2020 – June 2022

Backend Engineer

Accra, Ghana

- Contributed to sprint meetings and code review on *Panabios* and *Alkemy Care*, B2B platforms in Ghana's pharmaceutical and health space, working directly with product stakeholders.
- Helped maintain shared internal Python packages – a job that's partly engineering, partly coordination, since one breaking change ripples through every consumer.

SELECTED WRITING

- System Design Fundamentals Every Developer Should Know – how I think about trade-offs.
- From Monolith to Microservices: Lessons Learned – the kind of architectural decision a tech lead actually owns.
- CI/CD Pipelines That Actually Work: A Practical Guide – coordinating shipping, not just code.
- Clean Code That Actually Matters – what I look for in code review.

EDUCATION

Sakarya University

2023 – 2025

M.Sc., Software Engineering

Sakarya, Turkey

Thesis: STACAD — Detecting and Attributing LLM-Generated Code through Stylometric and Transformation Feature Analysis

University of Energy and Natural Resources

Graduated 2021

B.Sc., Computer Engineering

Sunyani, Ghana

LANGUAGES

English (fluent) | Turkish (working)
